

## ACCESSORIES FOR JETTING/VACUUM MACHINES

### Roller guide for hose – bottom

The simple construction of the roller guide protects the hose from the effects of friction on the bottom edge of the sewage well. Rollers are made from hard material, it makes easier to slip the hose and protect it from mechanical damage. The equipment has a security cable.

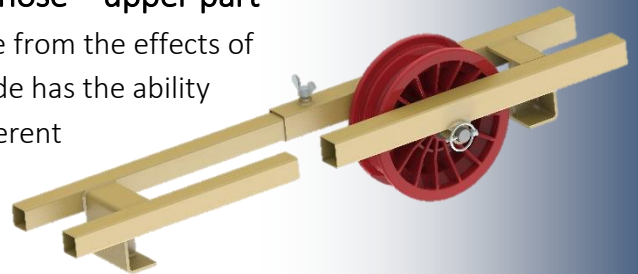

### Sliding roller guide for hose – bottom

The simple construction of the roller guide protects the hose from the effects of friction on the bottom edge of the sewage well. Rollers are made from hard material, it makes easier to slip the hose and protect it from mechanical damage. The equipment has a security cable. The length of the sliding roller guide is 2.60 - 4.60 m.

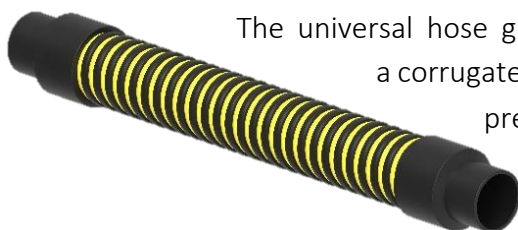

### Roller guide for hose – upper part

The simple construction of the roller guide protects the hose from the effects of friction on the upper edge of the sewage well. The roller guide has the ability to regulate the spacing along with the blockade to match different sizes of sewer hole. Rollers are made from hard material, it makes easier to slip the hose and protect it from mechanical damage.

### Tube hose guide

The universal hose guide is made of high quality material in the shape of a corrugated flexible pipe. Prevents damage to the outer layer of the pressure hose on the edge of the sewage well. It can be used on the upper and lower edge. On the equipment there is a security cable.

### Hose guide
