

HYDRAULIC ROOT CUTTING

Hydraulic root cutter is designed for cutting roots overgrowing pipes. It can also be used to remove blockages in pipes caused by the deposition of hard fats.

It is designed to work with a high-pressure device with pump parameters:

- ✓ working pressure: 50 -140 bar
- ✓ flow rate: 40 - 70 l/min

It is perfect for working with high pressure cleaners from the PYTON series. Connection ½". Range of application - pipes with a diameter of 100, 150, 200 mm.

On the equipment of the cutting machine there are: 3 sets of cutting knives for pipes 100, 150, 200 mm and 3 pieces of guides for diameters as above.

The whole is placed in transport case. Weight of the set about 6 kg.
