

HYDRAULIC ROOT CUTTING

Hydraulic root cutter is designed for cutting roots overgrowing pipes. It can also be used to remove blockages in pipes caused by the deposition of hard fats.

It is designed to work with a high-pressure device with pump parameters:

- ✓ working pressure: min. **80 bar**
- ✓ flow rate: min. **135 l/min**

It is perfect for working with high pressure cleaners from the PYTON, TITAN and COMBI series. Connection $\frac{3}{4}$ " or 1". Range of application - pipes with a diameter of 150 - 400 mm.

On the equipment of the cutting machine there are: 5 sets of cutting knives for pipes 150, 200, 250, 300, 400 mm and 5 pieces of guides for diameters as above.

The whole is placed in transport case. Weight of the set about 8,5 kg.
